Agenda

An interactive website was published for sharing events in Amman, it will collaborate companies and users to increase the activities in Amman which will increase investment.

The Agenda website is an application. The purpose of the website is to resolve the client to allow website users to perform tasks related to booking Events.

Agenda users can Search for there fit event order by date & time and type of it
They can also have their similar events page depend on their choice of the category of events
They can book the event and add it to favorite list, Each time they book the loyalty points will increase for the claim of their awards.

Beside of that, and the company can publish their event on the website after having an account, be up to date each time a booking happened and tracking the status of the event request when the admin make an action on it.

At the end we have an admin which have the fully-access on the website for accepting event or not, add awards and new categories or delete events

Agenda will be built on Apache Server, PHP,laravel, and MySQL with JavaScript, React. It will be Web Application and accessible with any standard compliant browser.
